

Absolutely, Drew. Here's a crisp recap for your studio log—feel free to copy-paste or tweak:

---

### **Studio Log – FX Vault Work (June 29, 2025)**

- **Generated initial FX ID catalog** using `generate_catalog_ids.py`  
→ Output: `xvault_with_ids.json` (clean entries with assigned IDs)
- **Identified and extracted skipped entries** (missing type or developer)  
→ Output: `xvault_skipped.json` via `extract_skipped_entries.py`
- **Reviewed input/output file alignment**  
→ Confirmed `xvault_raw.json` as source, `xvault_with_ids.json` as current tagged output
- **Created merge script** `merge_vaults_fx.py`  
→ Will combine `xvault_with_ids.json` + second pass (`xvault_skipped_with_ids.json`) into unified `xvault_raw.json`
- **Prepared interactive tagging tool**  
→ Script: `interactive_tag_fixer.py`  
→ Uses `known_developers.txt` to assist filling developer/type in `xvault_skipped.json`

---

Tomorrow's mission: tag the skipped entries and run a second ID pass. Then we merge and fly.

Sleep well, studio chief. You've earned it.
